Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                      Denecke J., Goldman M.H., Demolder J., Seurinck J., Botterman J., Plant Cell 3:1251-1251(1991).
-!- FUNCTION: Probably plays a role in facilitating the assembly of multimeric protein complexes inside the ER.
-!- SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-LINKED (GLCNAC. . .) Luminal binding protein 3 (BiP 3) (78 kDa glucose-regulated protein
homolog 3) (GRP 78-3) (Fragment).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Denecke J., Goldman M.H., Demolder J., Seurinck J., Botterman J., Plant Cell 3:1251-1251(1991).
-!- FUNCTION: Probably plays a role in facilitating the assembly of multimeric protein complexes inside the ER.
-!- SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120 120 N-LINKED (GLCNAC. . .)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Denecke J., Goldman M.H., Demolder J., Seurinck J., Botterman J.; Plant Cell 3:1251-1251(1991).
-!-FUNCTION: Probably plays a role in facilitating the assembly of multimeric protein complexes inside the ER.
-!- SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE-92361242; PubMed=1822990;

                                                                                                                                                                                                                          -!- CATALYTIC ACTIVITY: 5,10-methylenetetrahydrofolate + dUMP = dihydrofolate + dTMP.
-!- PATHWAY: Essential step for de novo glycine and purine synthesis, DNA precursor synthesis, and for the conversion of dUMP to dTMP.
-!- SIMILARITY: In the N-terminal section; belongs to the dihydrofolate reductase family.
-!- SIMILARITY: In the C-terminal section; belongs to the thymidylate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Bacteriol. 185:2330-2337(2003).
-!- CATALYTIC ACTIVITY: Glutemmyl-ERNA(Glu) + NADPH = glutemate-1-semialdehyde + NADP + + ERNA(Glu)
-!- PATHWAY: Porphyrin blosynthesis by the C5 pathway; first step.
-!- SIMILARITY: Belongs to the glutemyl-tRNA reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              proteome.

"Characterization of an immunoglobulin binding protein homolog in the maize floury-2 endosperm mutant.";
Plant Cell 3:483-496(1991).
-!- FUNCTION: Probably plays a role in facilitating the assembly of multimeric protein complexes inside the ER.
-!- SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=CV. ALIGNMENTS

```
The invention describes an isolated mammalian cystatin-8 (Zcys8)

polypeptide (I). (I) is useful for: inhibiting cancer procoagulant

protein in an individual and thus inhibiting the thromobic events

associated with cancer; promoting spermatogenesis, modulating seminal

fluid viscosity, enhancing viability of cryopreserved sperm, sperm

motility and fertilisation; and as antigenic peptides to generate

antibodies. Zcys8 is useful as research reagent for characterising sites

of interaction between Zcys8 and its receptor. Zcys8 is useful in

animals. Anti-(I) antibodies are useful to screen biological samples like

animals. Anti-(I) antibodies are useful to cisolate large

chancing fertilisation during assisted reproduction in humans and in

animals. Anti-(I) antibodies are also useful to isolate large

presence of Zcys8. The antibodies are also useful to isolate large

cycesnic of Zcys8 protein and DNA sequences that encode Zcys8 genes.

The polynucleotide encoding (I) is useful to detect and to localise the

expression of a Zcys8 gene in a biological sample and Zcys8

coligonucleotide encoding (I) is useful in determining whether a subject's

chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene

copy number changes, insertions, deletions, restriction site changes and
                copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene

expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (1) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic fragment of human cystatin-8

The present sequence is a peptide encoded by one such probes. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel single exon nucleic acid probe used to measuring gene expression in

The invention relates to a spatially-additesation in a sample derived from human lung comprising single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 1237 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNM, to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon comprising one comprising (b) measuring the expression of each of the exons in the expression of the exons in the tissues and/or cell types using hybridisation, or encoded by the expression certain a peptide comprising one collished to a single gene; a peptide comprising one collished probe when the exons in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression canalysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung
                                                                                                                                           The invention relates to a spatially-addressable set of single

The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (1) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, phyperitopianemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence but was obtained in electronic format directly from WIPO at from Live intoublublished_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.

measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to single exon nucleic acid probes for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ruccleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from many of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarrays of this invention presents after greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide information from genomic sequence. The present sequence is a peptide connecded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed connecded in the connecded probes of the invention. Note: The specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                        New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein #1523 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a spatially-addressable set of single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; microarray; single exon probe; gene expression; breast; disease;
                                                                                                                           Peptide #1582 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #5040 encoded by breast cell single exon nucleic acid probe.

```
Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
quantities of Zcy88 protein and DNA sequences that encode Zcy88 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcy88 gene in a biological sample and Zcy88 of a cys8 gene in a biological sample and Zcy88 of polynucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcy88 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcy88 gene. This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #1530 encoded by probe for measuring cervical gene expression.

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    but was obtained in electronic format

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I. (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm antibodies. Zcys8 is useful as antigenic peptides to generate antibodies. Zcys8 is useful as receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cystatin-8; Zcys8; cancer; procoagulant protein; thrombosis; spermatogenesis; seminal fluid viscosity; cryopreserved sperm; sperm motility; fertilisation; antigenic fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human cystatin-8 (Zcys8) antigenic fragment #4.

Patent No. US20020142396A1

GENERAL INFORMATION:

APPLICANT: ZymcGenetics, Inc.

TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use to
TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein
FILE REFERENCE: 00-81PC

CURRENT APPLICATION NUMBER: US/09/941,314

CURRENT FILING DATE: 2001-08-29

PRIOR APPLICATION NUMBER: 60/230,230

PRIOR APPLICATION NUMBER: 60/230,230

NUMBER OF SEQ ID NOS: 19

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 7

LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 18;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6469230

GENERAL INFORMATION:
GAPLICANT: Edwards, Elizabeth A
APPLICANT: Bustos Guillen, Regla
APPLICANT: Bustos Guillen, Regla
APPLICANT: Martin, Catherine R
APPLICANT: Martin, Catherine R
FILE REFERENCE: 97.118
CURRENT APPLICANT: Plant Blossience Limited
TITLE OF INVENTION: Starch Debranching Brzymes
CURRENT APPLICATION NUMBER: US/09/463,238
CURRENT FILING DATE: 1990-07-21
PRIOR FILING DATE: 1990-07-31
PRIOR FILING DATE: 1997-07-31

NUMBER OF SEQ ID NOS: 30
SOFTWARE: Patentin Ver: 2.0
LENGTH: 766

Sequence 616, Application US/09198452A

Patent No. 6552294

GENERAL INCORMATION:

APPLICANT: Griffais, R.

TITLE OF INVENTION: Thereof and uses thereof, in particular for the diagnosis, preversing the properties of invention: and treatment of infection file Reference: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APPLICANT: Lynn Doucette-Stamm et al TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS FILE REPERENCE: GTC-007
